PROFILE

Software Engineer working on ERP and business systems, combining frontend implementation with requirements analysis, data, testing, and technical documentation. Experienced in API-backed workflows and role-based permissions, with a foundation in databases, data science, and AI.

PROFESSIONAL EXPERIENCE

Software Engineer | MERP

Riyadh | 2026 - Present

- Contribute to ERP workflows across procurement, inventory, facilities, assets, and maintenance.
- Build and improve React and TypeScript interfaces connected to REST APIs.
- Work with permissions, workflow states, business rules, testing, and server-backed data.
- Translate system gaps into technical requirements, acceptance criteria, and documentation; participate in pull request and system-readiness reviews.

Database Programmer | Musanada Business Services

Graduate Development Program | Dec 2025 - May 2026

- Worked with SQL, relational databases, ERP data, and system integration.
- Supported data accuracy, reporting, and business-process automation in an enterprise environment.

Software Developer | Independent projects

Project-based | 2019 - 2024

- Built Android applications with Kotlin, web systems with PHP and SQL, and Python desktop applications.

SELECTED PROJECTS

Beyond the Stars | Data Science Team Capstone

Interactive analysis of 17,095 Saudi tourism reviews across five regions using NLP, sentiment exploration, LDA topic modeling, and Streamlit. [View repository](#)

Mu'id | AI Team Capstone

Arabic Qudrat preparation platform using Python, FastAPI, LLMs, retrieval-augmented generation, OCR, and databases. Private team project; original question data is not published.

Interior Designers Directory | Android Capstone

Mobile directory for discovering interior designers, reviewing portfolios, and contacting designers. Built with Kotlin, XML, Android Studio, and AndroidX.
